Description:

The common image of the Confederate Army during the Civil War (1861-1865) is dominated by a limited number of early photographs of soldiers wearing the gray and butternut associated with the CS regulations and quartermaster issues. This sequence of books examines a much wider field:

the original uniforms of the state militia and volunteer companies which were brought together to form the Confederate armies, and the continuing efforts by individual states to clothe their troops as wear-and-tear reduced the originally wide range of uniforms. A mass of information from state papers and other contemporary documents is illustrated with rare photographs and meticulous color reconstructions.

This is a most worthy men-at-arms series; like the books description says, it shows the much more colorful side to the uniforms of the Confederate Army. One man depicted in the color plates for Volume One that I found particularly interesting was a soldier in the Union Light Infantry, a SC unit based on the British Black Watch (42nd Royal Highlanders). The plates are pretty much the highlight of this series, and show realistic looking soldiers surrounded by beautiful women and scenery, and bearing all their various weapons. The text, nonetheless, reveals numerous interesting details. This is an excellent source on the uniforms and appearances of the soldiers of the Confederacy.
